

Aspirator

EBM Manufacturing, Inc. • Norfolk, NE • 877-370-4948 • www.ebmmanufacturing.com

In November 2017, the EBM Manufacturing aspirator was introduced – a single-pass, closed-circuit aspirator that uses air to remove fines, dust, and lightweight foreign material from a wide range of grains, including wheat, oats, barley, sorghum, and corn.

According to Salesman Scott Sanne, “The aspirator was designed to meet customers’ needs and adds another type of efficient and effective separation. It can be used in-line after the screening process in conjunction with the EBM Gentle Roll™ screener or as a standalone aspirator.”

User-friendly Adjustments During Operation

“Consumers want super-clean, debris-free products, and the EBM Manufacturing aspirator is capable of removing lighter-density materials that are similar in size to the grain

EBM Manufacturing aspirator.

that’s being screened. Visual sight glasses on the aspirator enable operators to confirm performance while the aspirator is running, make adjustments, and immediately see the adjustments’ effects,” he adds.

Features

- Adjustments to handle a wide range of products.
- Airflow can be adjusted to accommodate products with different densities, sizes, and shapes.
- Air passes through the product flow at a rate calculated to remove lightweight material.
- The aspirator can be incorporated into new or existing air systems.
